Overview & Training Workshop Objectives

This comprehensive training program is designed to introduce participants to SAP S/4HANA using a simulated manufacturing business dataset tailored for hands-on learning. The workshop provides foundational knowledge of SAP S/4HANA architecture, core modules, and key business processes, with a special focus on manufacturing operations such as production planning, inventory management, and order fulfillment. Participants will gain the skills to confidently navigate the system and understand how integrated processes support end-to-end operations in a manufacturing environment.

What You Will Learn

- The fundamentals of ERP and SAP S/4HANA evolution
- How to navigate SAP Fiori Launchpad and SAP GUI
- Organizational structures within SAP
- Core business processes: Sales & Distribution, Materials Management, Production Planning, and FinancialAccounting
- Cross-module integration and analytics capabilities
- Hands-on experience with Industry Business Process case studies and exercises

Learning Outcomes:

By the end of this training, participants will be able to:

- Understand SAP S/4HANA architecture and features.
- Navigate and utilize SAP Fiori and SAP GUI.
- Perform key business transactions in Sales,
- Procurement, Production, and Finance.
- Recognize the integration points across different modules.
- Apply knowledge through practical exercises within the
- Manufacturing Industry scenario.

Training Plan Outline

Module 1: Introduction to ERP & SAP Evolution
Learn the fundamentals of Enterprise Resource Planning (ERP) systems and explore the evolution of SAP, highlighting its significance in modern business operations.

Module 2: Getting Started with SAP S/4HANA & Manufacturing Industry Business Process.
Gain a clear understanding of SAP S/4HANA's architecture and core functionalities, with a specific emphasis on how manufacturing business processes leverage the system to improve operational efficiency and streamline workflows.

Module 3: Organizational Structure in SAP
Understand how SAP defines and manages organizational units, such as plants, sales organizations, and company codes, to streamline business activities.

Module 4: Sales & Distribution Processes
Discover the end-to-end sales cycle within SAP, including order processing, pricing, and delivery management.

Module 5: Materials Management (Procure-to-Pay)
Explore procurement procedures, inventory management, and logistics functions to optimize material flow and supplier relationships.

Module 6: Production Planning Fundamentals
Learn how SAP supports manufacturing planning, scheduling, and control to improve production efficiency and resource utilization.

Module 7: Financial Accounting Overview
Get an introduction to SAP's Financial Accounting module, covering key processes like ledger management, accounts payable, and receivable.

Instructional Approach & Unique Value

Our interactive, instructor-led approach blends theoretical knowledge with practical, real-world case studies based on business industry scenarios. This hands-on methodology ensures you gain both a solid understanding and the confidence to navigate and utilize SAP S/4HANA effectively. Through live demonstrations, guided exercises, and the use of analytics dashboards, the training offers a unique and immersive learning experience designed for beginners and aspiring SAP professionals.

Who Should Attend

- University students aspiring to enter the SAP domain
- Entry-level SAP consultants and Business Analysts
- End users seeking foundational SAP S/4HANA knowledge
- ERP beginners aiming to build core skills
- Professionals interested in digital transformation and enterprise resource planning

Join us today and unlock the power of SAP S/4HANA — Your Gateway to Modern Business Solutions!
